Minor civil division (MCD) data contained in vital statistics data files, and reports developed from the files, are based upon the information supplied to the department in the course of registering vital events. Special studies of MCD data quality revealed that there are inaccuracies in these data. The degree of inaccuracy encountered is as high as 25 percent. Any use of these data, especially for comparisons across MCD's, may be affected by inaccurate reporting. The most common mis-allocation error occurs with smaller cities or villages, surrounded by a township. People providing information for the vital record stipulate that the subject of the vital record or the decedent lives in a city, rather than in a township which was their actual residence. This is usually because the
